

SANGHI INDUSTRIES LIMITED

Energy Management Policy

Energy Management Policy

Sanghi Industries Limited (Sanghi) considers energy as an important parameter of business performance and recognizes the global action needed for sustainable energy consumption and resource conservation to reduce the overall environmental footprint to mitigate the adverse impact of climate change.

As a cement company, Sanghi is committed to continuously improving the energy efficiency of its operational processes. This policy provides the guidelines to continuously optimize energy use to improve our sustainability performance.

Sanghi shall endeavour to:

- Use Alternative fuel and low cost waste material such as petcoke
- Comply with all applicable energy management related regulations.
- Set objectives, targets and processes to reduce energy and carbon footprint by implementing energy conservation activities in continuous manner by adopting energy efficient technologies.
- Promote usage of renewable, green and clean energy sources.
- Encourage green procurement and innovations to adopt sustainable and energy efficient technologies for low carbon development.
- Drive awareness campaigns for internal and external stakeholders to disseminate information about the importance of energy management and improving energy efficiency.
- Measure, monitor and review the energy performance in Sanghi Industries Limited ordinance with this policy at regular intervals.
- Assist suppliers and business partners in their energy management journey.

The content and robustness of implementation of this policy will be reviewed periodically and revised accordingly.
